TMK Pipe Metallurgical Company

TMK Longitudinal LD Receives Subsea Certification. Volzhsky's longitudinal large-diameter production received the DNV-OS-F101 submarine pipeline systems certification in late December 2009. The OS-F101 certification allows TMK to participate in large-scale subsea pipeline projects as the Nord Stream, South Stream, and Shtokman pipeline project > [more](#)

LEOS Leak Detection

LEOS leak detection is the most sensitive leak detection system for pipelines. The LEOS system was developed for above and underground as well as for offshore and underwater applications. The flexible sensor tube can be installed in a linear geometry for monitoring pipelines and in a plane manner for tank farms and gas tanks. There are no limits regarding the monitoring of pipelines

Bender Ferndorf

Pre-Stressing of Steel Pipes

The object of the new method is to provide the steel pipe with additional quality features through the application of increased pressure during the water pressure test. Analogues to the well-tryed stress test in the field we carry out this 'quality-improving pressure test' on request on each steel pipe already during pipe production. Pipes tested this way can be classified as 'pipes with proof of stress relief'. > [more](#)

European Oil & Gas Solutions ... Special promotion package

- Oil & Gas Journal presents six 'solutions' in a full page advertisement ... similar to this layout
- This ad reaches 104.000 subscribers ... professionals in the global Oil & Gas Industry
- This page will also be emailed to over 6.000 subscribers - subscribers groups will be selected by the six participants
- 'Oil & Gas Journal Daily Update' – mailed to 5 x 52.000 subscribers – will publish a banner plus link to the page
- This banner will also posted for one month in <http://www.european-petroleum-technology.com/>
- Package rate per participant: EUR 1680
